
Help us build a flood-resilient school

Mingalaba!

We, One Dollar Fund – Myanmar (ODF Myanmar), would like to ask for cooperation of your organization in our relief and rehabilitation efforts around flooded areas in Myanmar.

About ODF

First of all, let us give a brief introduction of ODF Myanmar. In order to offer a helping hand as much as we can in fulfilling basic needs for orphans, education, healthcare and natural disasters in Myanmar, ODF Myanmar was founded in **February 2010**.

Since then, our activities have been publicized to donors from different countries, via our website: www.odfmyanmar.org.

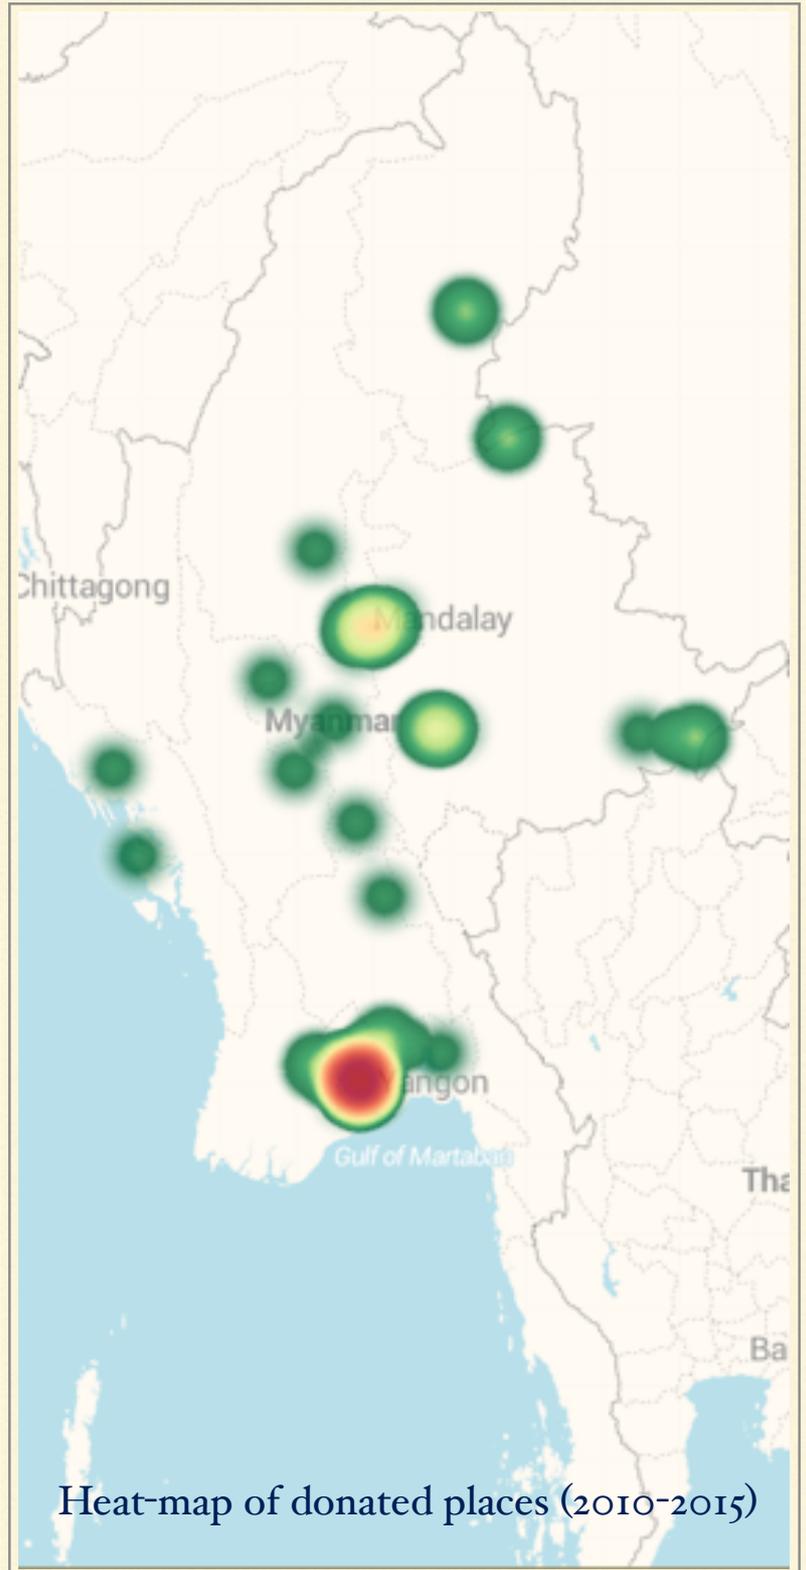

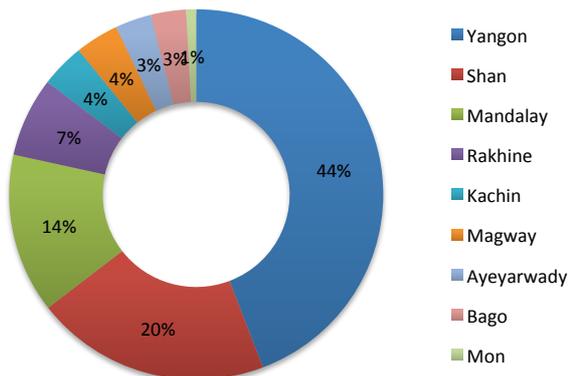

From its establishment to June 2015, ODF Myanmar, with the cooperation of our donors, had **assisted over 0.1 million SGD** to different needy places.

Ongoing Activities

Recently, ODF Myanmar has been offering a helping hand to flood victims in Myanmar.

ODF Myanmar has been assisting in relief and development works in Rakine State (together with Rakhine Thahara organization), Nga Le and Pann Chat villages in Sidoktaya Township from Magway Division, Sitha and other needy villages in Kalay Township and Haka, Tidim and Tonzang townships in Chin State.

**Donated places by State/Division
(2010-2015 June)**

Proposal on Cooperation

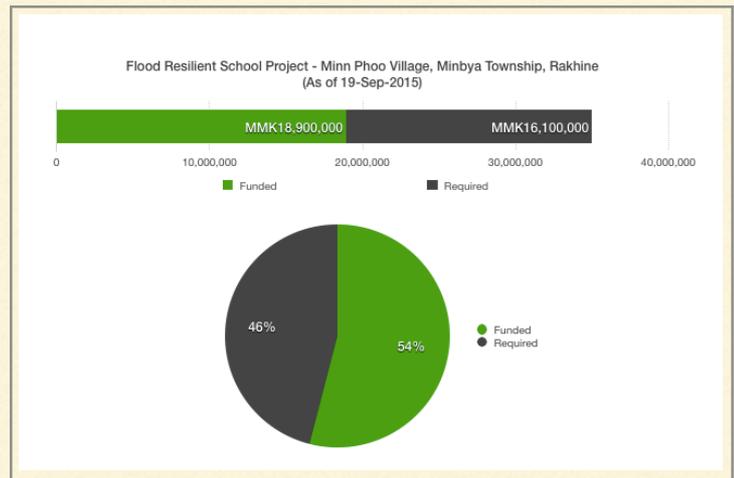

As part of our organization's rehabilitation efforts, we are working together with **SPINE Architects** (<http://www.spinearchitects.com>) and **UCSD Structural Engineers Group** to build a flood resistant school building in Minn Phoo Village in Minbya Township, Rakhine State. Building design is donated by **SPINE Architects** and **UCSD Structural Engineers Group**.

Minn Phoo Village is the place which was flooded entirely due to the recent flood. That is why the building which we are planning to donate is designed to serve as both a school building and a flood-resistant shelter during a flood.

The estimated cost for the building is about 35 millions Kyats (35,000,000 Kyats). As an initial fund, **ODF Myanmar** has contributed 10 million Kyats (10,000,000 Kyats) and **SPINE Architects** has donated 1,300,000 Kyats.

The building will have **two storeys** with an area of **60x40 square feet** and will be able to accommodate up to **200 students**. In the occurrence of a flood, the building will be clear from 15-foot water level and its rooftop can serve as a **shelter if the water level increases up to 25 feet**.

Currently, the project funding still has a long way to go – we are about 16.1 millions Kyats (i.e. 46% of the whole project) behind the goal. Hence, we would like to initiate a cooperation proposal to your organization.

Moreover, **please be informed that SPINE Architects will donate building designs to any organizations or individuals** who are interested in donating those flood resistant buildings in Rakhine State or other places.

We are targeting to commence the construction process some time in October 2015.
